

base.BaseCLI.parse

markopy.MarkopyCLI.parse

base.BaseCLI.parse  
\_arguments

```
graph LR; A[base.BaseCLI.parse] --> C[base.BaseCLI.parse _arguments]; B[markopy.MarkopyCLI.parse] --> C;
```

The diagram illustrates a shared configuration or argument structure. On the left, two separate boxes represent different CLI parsing functions: 'base.BaseCLI.parse' (top) and 'markopy.MarkopyCLI.parse' (bottom). Arrows from both of these boxes point towards a single, larger box on the right. This rightmost box, which has a light gray background, is labeled 'base.BaseCLI.parse' followed by '\_arguments' on a new line. This indicates that both parsing functions share or interact with a common set of arguments or configuration parameters.
