

QMainWindow

```
classDiagram
    class QMainWindow
    class Markov_GUI_about["Markov::GUI::about"]
    Markov_GUI_about --|> QMainWindow
```

The diagram illustrates an inheritance relationship. At the top is a class box for QMainWindow, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are currently empty. Below it is a class box for Markov::GUI::about, which is shaded gray and also divided into three horizontal sections. The top section contains the class name, the middle section contains the attribute - ui, and the bottom section contains the method + about(). A blue arrow with an open triangular head points from the top of the Markov::GUI::about box to the bottom of the QMainWindow box, indicating that Markov::GUI::about inherits from QMainWindow.

Markov::GUI::about

- ui

+ about()
